			Off-Peak	0.03697	Summer 15.29	II

*The total effective monthly rates are the cumulative total of the applicable base rates and the applicable Electric Rate Adjustments. The Service and Facility Charge for all rate schedules is calculated by adding the applicable Service and Facility Charge plus the Base Rate Adjustments, plus the Total Rate Adjustments. The Energy Charges for Schedules R, RD, C, SGL, SG, are calculated by adding the applicable Energy Charge, plus the Base Rate Adjustments, plus the applicable Non-Base Rate Adjustments, plus the Total Rate Adjustments.

**The rates and charges included in the Rate Schedule Summation Sheets are for informational and billing estimation purposes only.

*** The kilowatt-hours in the Winter Season will not be billed on a tiered rate. In the Summer Season, the first 500 kilowatt-hours will be billed at Tier 1 (T-1) and any usage over 500 kilowatt-hours will be billed at Tier 2 (T-2).

Sheet No. 102

ELECTRIC RATES
PARTIAL DECOUPLING REVENUE REQUIREMENT

N

APPLICABILITY

This Partial Decoupling Revenue Requirement (PDRR) is applicable for all electric service under Residential General Service (Schedule R) and Commercial Service (Schedule C). The PDRR derived under this tariff will be recovered from or credited to customers through modifications to the General Rate Schedule Adjustments (GRSA) that are applied to the Schedule R and Schedule C customers.

DEFINITIONS

The following definitions apply for the calculation of the PDRR:

Adjusted Energy Charge (AEC)

The base kilowatt-hour charge(s) minus the component of the charge(s) earmarked for the recovery of Demand Side Management ("DSM") costs and variable Operations and Maintenance ("O&M") expenses. For each month of the performance Year the AEC will be derived separately for each of the R and C schedules, using the rates effective during that month.

Base Year

The test year approved by the Commission in the Company's most recent Phase I rate proceeding.

Base Year Monthly Usage per Customer (BUPC)

The average kilowatt-hour usage per customer for each of the R schedule and C schedule, respectively, for each billing month of the Base Year. For the R schedule the usage per customer during the summer months is split between usage subject to the Tier 1 charge and usage subject to the Tier 2 charge.

Performance Year (PY)

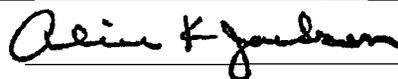

The calendar year during which the PDRR will be determined separately for the R and C schedules. If the Commission approves this tariff after January 1, 2015, the 2015 PY will begin with the first calendar month after the date of the Commission's Final Decision and extend through December 2015.

PDRR Cap

The maximum PDRR that can be collected in total from customers on each of the R and C schedules during the Recovery Period. This PDRR Cap shall be 5 percent of the total annual revenues for the R and C service schedules during the Performance Year and will be calculated separately for each schedule.

ELECTRIC RATES
PARTIAL DECOUPLING REVENUE REQUIREMENT

N

DEFINITIONS: - Cont'd

Performance Year Monthly Usage per Customer Values (PUPC)

The average weather-normalized usage per customer for each billing month of the Performance Year. This monthly usage will be derived separately for the R and C schedules, and the R schedule monthly usage during the summer months will be split between Tier 1 usage and Tier 2 usage. The weather-normalized usage per customer will be derived using the same weather-normalization procedure that the Commission approved as the basis for establishing test-year billing determinants in the Base Year.

Performance Year Total Monthly Bills

The total number of customer bills issued to customers taking service under each of the R and C schedules during the billing month in the Performance Year.

General Rate Schedule Adjustment (GRSA)

The percentage adjustment to R and C base rates under the General Rate Schedule Adjustment electric tariff.

Monthly Decoupling Component (MDC)

The monthly component of the PDRR for each of the R and C schedules that is entered into the schedule-specific Revenue Tracking Account.

Partial Decoupling Revenue Requirement (PDRR)

The sum of the monthly Decoupling Components during the Performance Year for each of the R and C schedules.

Recovery Period

The period over which the PDRR for any Performance Year will be recovered from or credited to customers. This period will be the 12 months beginning April 1 of the calendar year subsequent to the Performance Year.

ELECTRIC RATES
PARTIAL DECOUPLING REVENUE REQUIREMENT

N

DETERMINATIONS

Adjusted Energy Charge (AEC)

The Adjusted Energy Charge is calculated for each of the R and C schedules as follows:

$$AEC = (A - (B + C)) \text{ times } (1 + (E - D));$$

Where:

- A = Base Energy Charge
- B = The DSM component of the Base Energy Charge
- C = The component of the Base Energy Charge earmarked for the recovery of variable O&M expenses
- D = The PDDR component of the GRSA applied to the R or C schedule.
- E = The GRSA applied to the R or C schedule.

Monthly Decoupling Component (MDC)

The Monthly Decoupling Component shall be calculated for each of the R and C Rate Schedules as follows:

$$MDC = (A - B) \text{ times } C \text{ times } D;$$

Where:

- A = Base Year Monthly Usage per Customer (BUPC),
- B = Performance Year Monthly Usage per Customer (PUPC);
- C = Performance Year Total Monthly Bills; and
- D = Adjusted Energy Charge (AEC)

Partial Decoupling Revenue Requirement (PDRR)

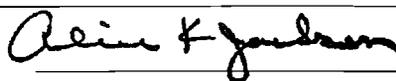

For each of the R and C schedules the PDRR is the lesser of A or (B + C);

Where:

- A = 5% of the total revenues from each of the R and C schedules during the Performance Year,
- B = The summation of each Monthly Decoupling Component (MDC) during the Performance Year, and
- C = The sum of MDC amounts in prior years that were uncollected because they exceeded the PDRR Cap.

Sub. Sixth Revised Cancels
Sheet No. 109

ELECTRIC RATES
TRANSMISSION COST ADJUSTMENT

APPLICABILITY

All rate schedules for electric service are subject to a Transmission Cost Adjustment ("TCA") rider to reflect the ongoing capital costs associated with transmission investment that are not being recovered through the Company's base rates. The TCA amount will be subject to annual changes to be effective on January 1 of each year. The TCA to be applied to each rate schedule is as set forth on Sheet No. 109B.

DEFINITIONS

Over/Under Recovery Amount - The Over/Under Recovery Amount is the balance, positive or negative, of TCA revenues received less the Transmission Cost intended to be recovered each year through the rider.

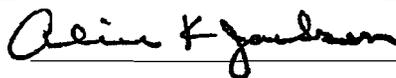

True-Up Amount - The True-Up Amount is equal to the difference, positive or negative, between the Transmission Cost, calculated based on the projected year-end net transmission plant and transmission CWIP balances, and the Transmission Cost calculated based on the actual year-end net transmission plant and transmission CWIP balances.

Transmission Cost - For the purpose of this tariff, the Transmission Cost is defined as (1) a return, equal to the Company's weighted average cost of capital, on the projected increase in the retail jurisdictional portion of the thirteen month average net transmission plant for the year in which the TCA will be in effect; (2) the plant-related ownership costs associated with such incremental transmission investment, including depreciation, accumulated deferred income taxes, income taxes and pre-funded AFUDC, and (3) a return, equal to the Company's weighted average cost of capital, on the projected year-end transmission construction work in progress ("CWIP") balance as of December 31 of the year immediately preceding the effective date of the TCA.

Transmission Cost Adjustment - The Transmission Cost Adjustment is equal to the Transmission Cost, plus, beginning with the second year of the rider, the True-Up Amount and, beginning with the third year of the rider, the Over/Under Recovery Amount, charged on a dollar per kilowatt basis for tariff schedules with demand rates and on a dollar per kilowatt-hour basis for tariff schedules without demand rates.

ELECTRIC COMMODITY ADJUSTMENT

APPLICABILITY

All rate schedules for electric service are subject to an Electric Commodity Adjustment (ECA) to reflect the cost of energy utilized to supply electric service. The Electric Commodity Adjustment Factors for all applicable rate schedules are as set forth on Sheet No. 111G and will be applied to all kilowatt-hours sold by the Company with the exception of any buy-through kilowatt-hours (BT kWh) sold to participants in the Interruptible Service Option Credit (ISOC) program who buy through an Economic Interruption. The ECA Factors for lighting service bills and other non-metered service will be determined by applying the ECA Factor to the calculated monthly kilowatt-hour consumption.

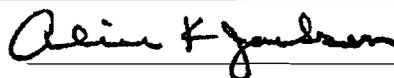

TIME-OF-USE ECA FACTORS APPLICABILITY

All kilowatt-hours used under any Rate Schedule for Commercial and Industrial Primary, Transmission or Special Contract Service customers shall be billed under the appropriate Time-of-Use ECA Factor. Customers that receive electric service under any Commercial and Industrial Secondary Service Rate Schedule that have measured demands of three hundred kilowatt (300 kW) or more for twelve (12) consecutive months may elect to be billed prospectively under the Secondary Time-of-Use ECA Factor. Subsequent to a customer's election to be billed under the Secondary Time-of-Use ECA Factor, customer must have a measured demand of three hundred kilowatts (300 kW) or more every month, except a customer may have one month within the previous twelve (12) months where the customer demand is less than three hundred kilowatts (300 kW). In the event that a second month occurs in any twelve month period where the customer's measured demand is less than three hundred kilowatts (300 kW), the Company shall bill the customer under the non-Time-of-Use Secondary ECA Factor.

The On-peak hours shall be 9:00 AM to 9:00 PM for all non-holiday weekdays. Holidays are defined as New Years Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day. The Off-peak period shall be all other hours. The On-peak and Off-peak price differentials are based on the ratio of system marginal costs for a calendar year. The On-peak and Off-peak price ratio will be projected annually and will be filed with the Commission on the first business day of November, and shall remain in effect for the subsequent calendar year. The TOU ECA rates will be updated with the Quarterly ECA rates and will be determined by applying the fixed annual On-peak and Off-peak ratios to the quarterly ECA cost of service.

Sheet No. 111A

**ELECTRIC RATES
ELECTRIC COMMODITY ADJUSTMENT**

TIME-OF-USE NOTICE AND METERING REQUIREMENTS

Customers receiving service under the Time-of-Use ECA must have their usage metered by an Interval Data Recorder ("IDR") meter. If a requesting customer is not currently metered with an IDR meter the Company will install an IDR meter as soon as reasonably practicable and the customer will be eligible for the Time-of-Use rate beginning with the first billing cycle immediately subsequent to the installation of the IDR meter.

ELECTRIC COMMODITY ADJUSTMENT QUARTERLY FILING

The Company shall file each quarter, on not less than fifteen (15) days notice, an application with the ECA Factors on Sheet No. 111G to be effective on the first day of the month of the next calendar quarter. The Company may also file for more frequent changes to the ECA factors, subject to Commission Approval.

ELECTRIC COMMODITY ADJUSTMENT

The ECA shall be calculated quarterly with the new ECA Factors to be effective on a prorated basis on the first day of the quarter. The ECA Factors shall be determined by dividing the Quarterly ECA Revenue Requirement by the projected kilowatt-hour sales to which the ECA is applicable for the next calendar quarter. The ECA Factors shall be differentiated by service delivery voltage to reflect line losses.

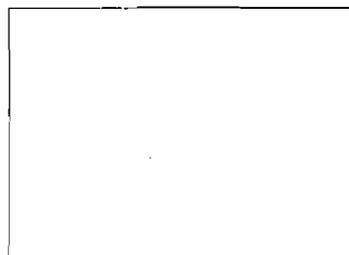

LOSS FACTOR

The ECA Factors take into account service delivery voltage to reflect line losses. Loss Factors are as follows:

Transmission	1.0000
Primary	1.0235
Secondary	1.0500

Primary and Secondary voltage losses may be updated by the Company from time to time.

ELECTRIC COMMODITY ADJUSTMENT - Cont'd

8) NGS Balance shall be the total cost for the sales of natural gas less the natural gas sales credit for all revenue received by the Company for the sale of natural gas to Southwest Generation for their Fountain Valley Facility.

The ECA revenue collected for the quarter will be adjusted for billing cycle lag.

Interest shall accrue monthly on the average monthly deferred balance (whether the balance is positive or negative). The monthly interest rate shall be at a rate equal to the average of the daily rates for Commercial Paper, Financial, 3-Month rates, published by the United States Federal Reserve H.15 report (<http://www.federalreserve.gov/releases/h15/data.htm>).

ADJUSTMENT FOR SHORT-TERM SALES MARGIN

Positive short-term sales margins from the calendar year shall be shared with retail customers through an adjustment to the ECA. Margin sharing shall be calculated separately for both the Generation Book margins and Proprietary Book margins. Proprietary Book margins shall be calculated from the Company's share of margins under the Joint Operating Agreement. Within each of these books, the retail jurisdictional Gross Margin shall be aggregated annually. If the aggregated Gross Margin from either book is negative, the negative margin shall not be passed on to retail customers.

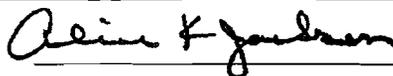

If the annual retail jurisdictional aggregated Gross Margin in either book is positive, then such positive annual retail jurisdictional Gross Margin shall be shared annually with retail customers through the ECA as follows:

1) Generation Book: Gross Margin in excess of \$678,027 for calendar year 2012 and subsequent years shall be shared ninety percent (90%) retail customers/ten percent (10%) Company.

2) Proprietary Book: Gross Margin in excess of \$514,659 for calendar year 2012 and subsequent years shall be shared ten percent (10%) retail customers/ninety percent (90%) Company.

Sheet No. 111E

ELECTRIC RATES
ELECTRIC COMMODITY ADJUSTMENT

ADJUSTMENT FOR SHORT-TERM SALES MARGIN - Cont'd

The Company shall include in its quarterly filing for effect April 1 of each year a report setting forth the retail customer share of positive short-term sales margins from the prior calendar year. The total positive short-term sales margins will be divided by three (3), and the quotient shall be subtracted from each quarterly ECARR for the remainder of the calendar year.

ADJUSTMENT FOR SO₂ ALLOWANCE MARGINS

Margins earned from the sale of SO₂ allowances by the Company shall be shared with retail customers in accord with Commission orders. The Company shall include in its quarterly filing for effect April 1 of each year a report setting forth the retail customer share of the SO₂ allowance margins from the prior calendar year. The margins to be shared will be divided by three (3), and the quotient shall be subtracted from each quarterly ECARR for the remainder of the calendar year.

PUEBLO INCENTIVE PROPERTY TAX CREDIT

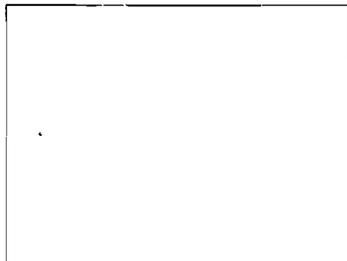

An adjustment shall be made to the Deferred Account Balance to include the flow-through to customers of the amount of any incentive property tax credit or payment received by the Company from the City of Pueblo or Pueblo County pursuant to agreements entered into by the Company with the City of Pueblo and Pueblo County in 2005, commencing with incentive property tax credits or payments attributable to property taxes payable for tax year 2012. As to each regular quarterly ECA application, the adjustment to the applicable Deferred Account Balance shall include all such incentive property tax credits and payments received by the Company during the quarterly period ending as of the last day of the calendar month immediately preceding the date of the ECA application.

ADJUSTMENT FOR TRUE-UP OF COSTS BETWEEN THE RESA AND ECA

An adjustment shall be made to the ECA Deferred Account Balance to collect the component of costs that were charged to the Renewable Energy Standard Adjustment ("RESA") that should have been charged to the ECA for the period 2010 - 2012. An adjustment to the ECA Deferred Account Balance shall commence beginning with the subsequent month after the Company receives Commission approval of said adjustment and shall be collected in the ECA Deferred Account Balance equally over a period of twelve months.

EQUIVALENT AVAILABILITY FACTOR PERFORMANCE MECHANISM

The Equivalent Availability Factor Performance Mechanism ("EAFPM") will apply only to the Company's performance in calendar years 2015 and 2016. An adjustment shall be made to the Deferred Account Balance to include the incentive or penalty attributable to the EAFPM for performance in both 2015 and 2016.

Twenty-second Revised Cancels Sheet No. 111F

ELECTRIC RATES
ELECTRIC COMMODITY ADJUSTMENT

EQUIVALENT AVAILABILITY FACTOR PERFORMANCE MECHANISM - CONT'D

These adjustments to the Deferred Account Balance shall be included in the Company's quarterly filing to be effective April 1, 2016, and April 1, 2017, and will include the total amount of the incentive or penalty for the prior calendar year.

For calendar years 2015 and 2016, the Company shall calculate the Current Year Weighted Average EAF for the Eligible Units. The Current Year Weighted Average EAF for the calendar year shall then be compared to the Historic Weighted Average EAFs for the Eligible Units, weighted by their Net Maximum Capacity, for the years 2009-2013. If the Current Year Weighted Average EAF is greater than or equal to the second highest Historic Weighted Average EAF from the period 2009-2013 (at or above 84.18 percent), the Company will earn an incentive of \$3 million. If the Current Year Weighted Average EAF is equal to or lower than the fourth highest Historic Weighted Average EAF from the period 2009-2013 (at or below 80.76 percent), the Company will be assessed a penalty of \$3 million. If the Current Year Weighted Average EAF falls between 80.76 percent and 84.18 percent, non-inclusive, the Company will neither earn an incentive nor be assessed a penalty.

The Company shall exclude the following circumstances from the Current Year EAF calculation:

- 1.) Outage events that are classified as Outside Management Control in the Generating Availability Data System ("GADS").
- 2.) All outage events that are specifically attributable to an order from a state or federal regulatory agency or an adopted state or federal law.

For purposes of this Equivalent Availability Factor Incentive Mechanism section, the following definitions will apply:

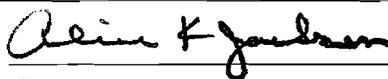

Eligible Units. Cherokee 4, Comanche 1-3, Hayden 1-2, Pawnee, Fort St. Vrain 1-4 and Rocky Mountain Energy Center 1-3.

Equivalent Availability Factor ("EAF"). The total number of available hours for the specified time period divided by the number of hours in the same period. The EAF shall be calculated consistent with the North American Electric Reliability Council requirements as reported in GADS.

Current Year Weighted Average EAF. The average of the EAFs of the Eligible Units in the current year, weighted by the Net Maximum Capacity of the Eligible Units.

ELECTRIC RATES
CLEAN-AIR CLEAN-JOBS ACT RIDER

N

APPLICABILITY

All rate schedules for electric service are subject to a Clean-Air Clean-Jobs Act Rider (CACJA Rider) designed to recover both the capital and operations and maintenance costs associated with Eligible Clean-Air Clean-Jobs Act Projects.

The CACJA Rider for all applicable rate schedules is as set forth on Sheet No. 112D. The CACJA Rider shall be calculated for each service schedule and for customers subscribing for Standby Service.

DEFINITIONS

Clean-Air Clean-Jobs Act (CACJA)

House Bill HB10-1365 required Public Service to work with the Colorado Department of Public Health and Environment to submit a plan to the Public Utilities Commission to reduce nitrogen oxide emissions at Front Range coal plants by 70 to 80 percent by December 31, 2017. The plan, which was approved by the Commission in 2010, includes the retirement of five aging coal plant, their replacement with a new natural gas combined cycle plant, the addition of pollution control equipment at three other coal plants, and the conversion of one coal plant to a natural gas fuel source.

Eligible CACJA Projects

The approved projects included in this CACJA Rider are as follows:

1. Cherokee 5, 6, and 7 -- a natural gas combined cycle (CC) plant, including interconnection equipment.
2. Pawnee selective catalytic reduction and particulate scrubber.
3. Hayden 1 selective catalytic reduction.
4. Hayden 2 selective catalytic reduction.

CACJA Revenue Requirement

The forecasted or actual costs associated with Eligible CACJA Projects, including the following:

1. Variable non-fuel Operation and Maintenance (O&M) expenses, including chemical and water expenses. The 2015 CACJA Base Costs will include the variable non-fuel O&M for the existing Cherokee 3 coal unit. After that unit is retired at the end of 2015, subsequent CACJA rider calculations will reflect the variable O&M savings from Cherokee 3's retirement.
2. Depreciation expense.

DEFINITIONS - Cont'd

CACJA Revenue Requirement - Cont'd

- 3. State and federal current and deferred income tax expense.
- 4. Return on net plant for projects that have been placed into service, including the accumulated allowance for funds used during construction (AFUDC) for capital expenditures incurred before January 1, 2015.
- 5. Return on construction work in progress (CWIP) for capital expenditures incurred on or after January 1, 2015.

CACJA Forecasted Revenue Requirements (FRR)

Forecast of the CACJA Revenue Requirement for the subsequent calendar year, based on the best available estimates of capital expenditures, O&M expenses, taxes, and the cost of capital.

CACJA Actual Revenue Requirements (ARR)

The actual CACJA Revenue Requirement for the previous calendar year.

CACJA Base Costs (BC)

The portion of CACJA Revenue Requirements that has been approved by the Commission to be collected through the Company's base rates. This amount is currently \$94,217,018, and will be adjusted to reflect any future Commission-approved changes to the base-rate recovery of Eligible CACJA Costs.

CACJA Rider Revenues (RR)

The actual amount collected from customers in a given year through the CACJA Rider.

Allowance for Funds Used During Construction (AFUDC)

An account that tracks the accumulating costs to the Company to fund large construction projects. The account includes the financing cost of the capital invested in the construction project. These costs are tracked until the project is placed into service, at which point the accumulated AFUDC is included as part of the gross plant placed in service.

Construction Work In Progress (CWIP)

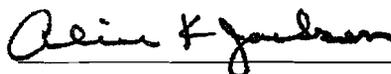

The capital expenditures the Company incurs for a project prior to its in-service date.

Return on CWIP

The Return on CWIP will be the Company's weighted average cost of capital (WACC) times the average monthly CWIP balance for the relevant period.

ELECTRIC RATES
 CLEAN-AIR CLEAN-JOBS ACT RIDER

N

DEFINITIONS - Cont'd

Weighted Average Cost of Capital (WACC)

The costs of debt and common equity weighted by the relative proportions of each in the Company's balance sheet. For the purpose of developing the FRR, a forecast of the debt cost and capital structure for the following calendar year will be used. For the purpose of developing both the FRR and ARR, the return on equity shall be the latest return on equity approved by the Commission for the Company's electric department.

CACJA Rider True-up

The over-recovery or under-recovery of CACJA costs from two years previous. In 2015 and 2016 the CACJA Rider True-up value shall be \$0. The CACJA Rider True-up consists of two components. The first is an adjustment that reconciles the difference between the forecasted revenue requirements (FRR) and the actual revenue requirements (ARR) from two years prior. The second component accounts for the difference between the revenues the rider was designed to recover from customers and the actual dollars collected.

CLEAN AIR CLEAN JOBS ACT RIDER AMOUNT

The CACJA Rider Amount shall consist of the current year's Forecasted Revenue Requirement less the CACJA Base Costs, plus the CACJA Rider True-up.

The following formula is used to determine the total annual costs to be collected through the CACJA Rider.

$$\begin{aligned} \text{CACJA Rider} &= \text{Current Year Rev. Req.} + \text{True-up}_1 + \text{True-up}_2 \\ &= (\text{FRR}_y - \text{BC}) + (\text{ARR}_{y-2} - \text{FRR}_{y-2}) + (\text{FRR}_{y-2} - \text{RR}_{y-2} - \text{BC}) \end{aligned}$$

FRR_y = Forecasted CACJA revenue requirements in year 'y', the current year

BC = Amount of CACJA Base Costs that included in the Company's base rates

FRR_{y-2} = Forecasted CACJA revenue requirements in year 'y-2', two years previous

ARR_{y-2} = Actual revenue requirements for CACAJA projects in year 'y-2', two years previous

RR_{y-2} = Actual revenues collected through the CACJA Rider in year 'y-2', two years previous

RATE DESIGN

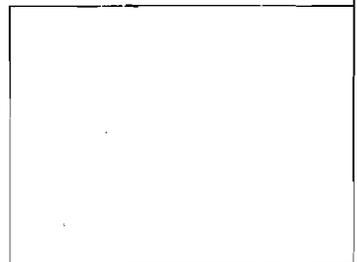

The costs of approved Clean-Air Clean-Job initiatives will be allocated to rate classes based on the production demand allocator approved in the Company's latest Phase II rate case. The allocation factors will be updated based on a projection of energy use by customer class for the forecast year. Rates shall be designed by dividing the costs allocated to each class by the projected class billing determinants. Residential Demand, Secondary General, Primary General, Transmission General, Special Contracts and Standby customers shall be billed the CACJA Rider on a demand basis; all other customers will be billed on an energy basis.

INFORMATION TO BE FILED WITH THE PUBLIC UTILITIES COMMISSION

Each revision to the CACJA Rider will be accomplished by filing an advice letter no later than November 1st of each year to take effect on the next January 1 and will be accompanied by such supporting data and information as the Commission may require.

The Company shall submit an additional annual filing on or around April 15, starting in 2016. In this filing the Company will: discuss the types and levels of expenditures incurred for Eligible CACJA Projects during the previous calendar year; and compare the FRR and ARR for the previous calendar year and explain material deviations.
